

1

ABSTRACT

2 A distance correcting apparatus of a surroundings
3 monitoring system includes a stereo imaging means for
4 stereoscopically taking a pair of images of a frontal scenery,
5 a parallax calculating means for calculating a parallax based
6 on the pair of images, a distance calculating means for
7 calculating a distance to an object based on the parallax and
8 a parameter for correcting distance, an approximation line
9 calculating means for calculating a plurality of approximation
10 lines extending in the distance direction in parallel with each
11 other based on the images, a vanishing point calculating means
12 for calculating a vanishing point of the images from a point of
13 intersection of the approximation lines and a parameter
14 correcting means for correcting the parameter based on the
15 calculated vanishing point.
